e-Yantra Summer Internship-2018

A System for Solving Jigsaw Puzzle using Multiple Robots

Aniket Anantraj Navlur
Ashis kumar Maharana
Kiran S Patil

Mentors:
Abhinav Sarkar, Kalind Karia

IIT Bombay

June 6, 2018

Overview of Project

- Project Name: A System for Solving Jigsaw Puzzle using Multiple Robots
- Objective:
 - To develop an autonomous system that can solve any Jigsaw Puzzle given its image using multiple robots.
- Deliverables:
 - ① Go-to-Goal controller for robot in a given frame
 - ② Autonomous solving of any Jigsaw Puzzle given just its image
 - ③ Proper documentation and report on the system.

Overview of Task

Task No.	Task	Deadline (in Days)
1	Python, OpenCV, Firebird V Intro, Xbee Communication	3
2	Pose and orientation calculation of 2 Firebird robots using color/Aruco markers	4
3	Programming the Go-To-Goal Controller for single Firebird V robot. Tuning the PID values to perfection	4
4	Implementing path planning with Firebird V where obstacles have been placed in arena	3
5	Detection of jigsaw puzzle blocks using Template Matching	2
6	Pick and place of blocks - gripper mechanism building	4
7	Implementing the entire solution for a given jigsaw puzzle	5
8	Documentation and reporting results	4

Task Accomplished

- Established communication with the robot using XBee.

Task Accomplished

- Established communication with the robot using XBee.
- Found the pose and orientation of the robot using ArUco markers.

Task Accomplished

- Established communication with the robot using XBee.
- Found the pose and orientation of the robot using ArUco markers.
- Created the data packets to be sent, received and parsed correctly

Task Accomplished

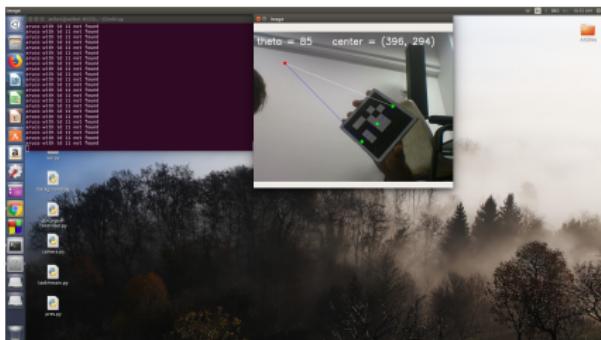

- Established communication with the robot using XBee.
- Found the pose and orientation of the robot using ArUco markers.
- Created the data packets to be sent, received and parsed correctly
- Tuned the PID values to perfection.

Task Accomplished

- Established communication with the robot using XBee.
- Found the pose and orientation of the robot using ArUco markers.
- Created the data packets to be sent, received and parsed correctly
- Tuned the PID values to perfection.
- Developed a Go-To-Goal controller for multiple robots.

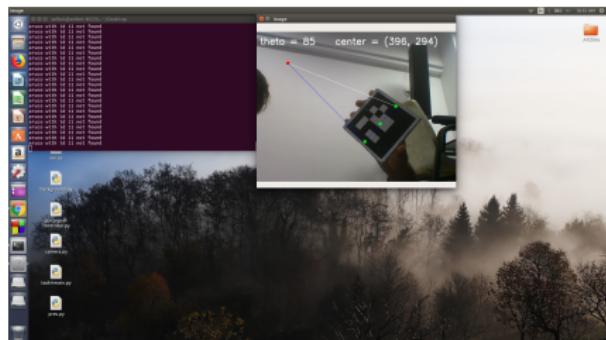

Task Accomplished

- Established communication with the robot using XBee.
- Found the pose and orientation of the robot using ArUco markers.
- Created the data packets to be sent, received and parsed correctly
- Tuned the PID values to perfection.
- Developed a Go-To-Goal controller for multiple robots.

Task Accomplished

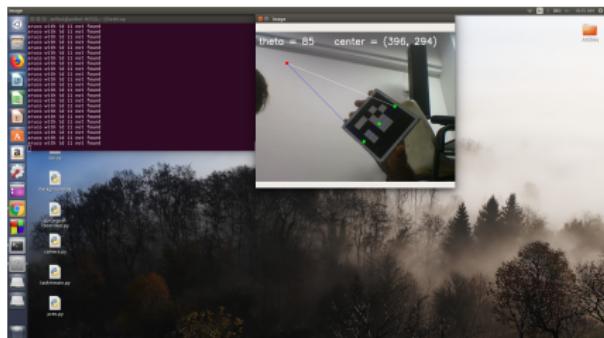

- Established communication with the robot using XBee.
- Found the pose and orientation of the robot using ArUco markers.
- Created the data packets to be sent, received and parsed correctly
- Tuned the PID values to perfection.
- Developed a Go-To-Goal controller for multiple robots.

```
<T901200|P200|0|0|R90|199|132|120|A|B|S|>
```

Task Accomplished

- Established communication with the robot using XBee.
 - Found the pose and orientation of the robot using ArUco markers.
 - Created the data packets to be sent, received and parsed correctly
 - Tuned the PID values to perfection.
 - Developed a Go-To-Goal controller for multiple robots.

The data packet is formed by the following values
 $< T \ tar_x | tar_y | P \ kp | ki | kd | R \ head_x | head_y | tail_x | tail_y | A \ deg >$

Challenges Faced

Future Plans

Thank You

Demo

Challenges Faced

- Determining the angle of ArUco Marker in the frame with proper resolution.

Challenges Faced

- Determining the angle of ArUco Marker in the frame with proper resolution.
- Finding the right library for serial communication

Challenges Faced

- Determining the angle of ArUco Marker in the frame with proper resolution.
- Finding the right library for serial communication
- Understanding the parameters of Xbee('MY')

Challenges Faced

- Determining the angle of ArUco Marker in the frame with proper resolution.
- Finding the right library for serial communication
- Understanding the parameters of Xbee('MY')
- Displaying the received data on LCD of firebird

Challenges Faced

- Determining the angle of ArUco Marker in the frame with proper resolution.
- Finding the right library for serial communication
- Understanding the parameters of Xbee('MY')
- Displaying the received data on LCD of firebird
- Creating data packets to hold the information about robot(its orientation, position, etc...) and parsing it once received by the robot.

Future Plans

- Path Planning of Robot.

Future Plans

- Path Planning of Robot.
- Designing and building Gripper Mechanism to pick and place puzzle pieces and implementing the entire solution.

Future Plans

- Path Planning of Robot.
- Designing and building Gripper Mechanism to pick and place puzzle pieces and implementing the entire solution.
- Solve a Multi-Robot Cooperative Box-pushing problem.

Thank You

THANK YOU !!!
